Project Executable Files

Date	30 September 2026
Team ID	SWTID-2026-7969
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	**Yes**
2	README / Setup Guide (instructions to run the project)	**Yes**
3	requirements.txt / package.json / dependency file	**Yes**
4	Database schema / seed files (if applicable)	**Yes**
5	Environment configuration file (.env.example or similar)	**Yes**
6	Deployed application URL (if hosted) / Executable binary	**Yes**
7	Dockerfile / Containerization config (if applicable)	**NA**
8	APK (if applicable for mobile apps)	**NA**
9	Test files and test results	**Yes**
10	Demo video or walkthrough (if required)	**Yes**

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
/it-procurement-flow-designer
├── /update_sets/
│   └── sys_remote_update_set_sn_it_procurement_v1.xml  # Complete ServiceNow Application Update Set
├── /src/
│   ├── /catalog_items/
│   │   └── standard_laptop_request.json          # Service Catalog Item Configuration
│   ├── /flow_designer/
│   │   ├── laptop_order_flow.json                # Flow Designer Trigger & Logic Schema
│   │   └── /custom_actions/
│   │       ├── trigger_manager_approval.js       # Custom Action Script for Approval
│   │       └── send_teams_notification.js        # MS Teams Webhook Notification Handler
│   └── /script_includes/
│       ├── UserEntitlementCheck.js               # GlideScript for user eligibility validation
│       └── UpdateAssetRecord.js                  # GlideScript for CMDB asset sync
├── /tests/
│   ├── AutomatedTestFramework_Suite.xml          # ServiceNow ATF Automated Test Suite
│   └── jmeter_performance_test.jmx               # Apache JMeter Performance Test Script
├── /config/
│   └── system_properties.env.example             # System properties & Webhook Endpoint templates
├── README.md                                     # Comprehensive Setup and Run Instructions
└── package.json                                  # Node.js dependencies for local REST API mock server
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL (Demo)	**https://drive.google.com/file/d/18UwB6vSgioYIISP3J1XUCPSmYqOZp1xG/view**
Repository Link	**https://github.com/Ravi-teja-777/AI-ML-and-GEN-AI-Track-Project-Template.git**
Login Credentials (Demo)	**Username: evaluator_demo**

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

ServiceNow Personal Developer Instance (PDI) with **Utah / Washington** release.
Admin access to import and commit Update Sets.
Node.js v18+ (optional, for running local vendor mock API server).

Step 1: Clone the GitHub repository: git clone https://github.com/Ravi-teja-777/AI-ML-and-GEN-AI-Track-Project-Template.git
Step 2: Log in to your ServiceNow Instance as Administrator (admin).
Step 3: Navigate to **System Update Sets > Retrieved Update Sets**.
Step 4: Click **"Import Update Set from XML"** and select sys_remote_update_set_sn_it_procurement_v1.xml from /update_sets/.
Step 5: Open the imported update set, click **Preview Update Set**, verify no errors, and click **Commit Update Set**.
Step 6: Navigate to **Process Automation > Flow Designer**, locate IT Procurement Laptop Order Flow, and click **Activate**.
Step 7: Open the Service Portal URL (/sp) and search for **"Standard Laptop Request"** to place and test orders.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Third-party vendor live fulfillment API requires corporate VPN credentials.	Workaround: Implemented mock REST endpoint (package.json) to simulate order dispatch payloads during testing.
2	Microsoft Teams approval notifications require webhook configuration per tenant.	Workaround: System falls back gracefully to standard Email notifications if Teams Webhook is inactive.
3	Personal Developer Instances (PDIs) go to sleep after inactivity.	Workaround: Ensure PDI instance is awake before running live portal tests.[cite: 13, 14]
